

### Fill the Chart!

Choose your **starting numbers**:

--	--	--	--	--	--	--	--	--

Choose your operation(s): \_\_\_\_\_

Fill in **solutions** to possible combinations of two numbers (including doubles). Repeats are ok if needed.

- Partners each need their own colour of bingo chip
- Partner 1 and 2 both place a bingo chip on any starting number (can be the same starting number).
- Rock-paper-scissors decides who gets to claim the solution. Winning partner places a bingo chip on the solution.
- Other partner moves their bingo chip to a different starting number and claims the solution of their number combined with their partner's chip (which stays in its spot for now). Be careful! If the solution has already been claimed, you lose a turn.
- Keep going and try to claim as many three-in-a-rows as possible!
