

# FIVE-FRAMES:

Cut each frame out. If you are working with a number that is less than 5, fold back spaces until you make a match between your number and the spaces on the frame. If you are working with a number between 5 and 10, add another 5 frame and fold back extra spaces as necessary.

The image displays three identical vertical five-frame grids. Each grid is a tall rectangle divided into five equal horizontal sections by four horizontal lines. The grids are arranged in a row, separated by small gaps. These frames are intended for students to use in mathematical activities, such as counting, writing numbers, or performing simple arithmetic operations.
